

Asset Value Maximisation

Engineering expertise for asset performance and value. AVC brings together multidisciplinary engineering, management consultancy and AI-enabled asset intelligence, with presence and networks spanning EMEA and Asia Pacific.

E

AVC Engineering

Understands the asset

Asset integrity · Asset management · Reliability & maintenance · Ageing asset and remaining-life assessment · Production and operational optimisation · Energy management · Process safety & risk · Technical assurance

D

AVC Digital

Understands the data

AI-enabled asset intelligence · Predictive analytics · Digital asset management · Risk-based decision support · Data integration · Performance dashboards · Agentic AI applications · Decision intelligence

C

AVC Capital

Captures the value

Opportunity screening and origination · Asset valuation support · Technical and commercial due diligence · Investment risk assessment · Capital allocation · Value assurance and owner representation

THREE STAGES, ONE VALUE PLAN

01 · DILIGENCE

Assess the asset

Establish condition, operating constraints and capital needs. Connect the evidence with investment assumptions.

02 · TRANSFORMATION

Deliver the change

Agree the value plan, specialist scopes and implementation responsibilities. Support asset teams through delivery.

03 · VALUE REALISATION

Track the value

Measure performance against the baseline. Connect operational results with cash flow and value realisation.

PRESENCE

London · Aberdeen · Abu Dhabi · Cairo. Headquartered in London.

EXPERIENCE

Founded from senior international experience in asset management, integrity, risk and technical advisory.

CLIENTS

Major and mid-sized E&P operators, financial institutions, EPCM firms, government and public-sector organisations.

Start with a technical challenge, an operational priority or an asset opportunity.
